ANIMAL TISSUE (IX)

- 1. What are epithelial tissues? How many types of them, explain their location and functions?
- 2. Why do blood considered as connective tissue?
- 3. How many types of connective tissues are there? Explain
 - a. their matrix constituent
 - b. Function
 - c. Location
- 4. What are contractile proteins? Explain its main function?
- 5. Differentiate between striated, smooth and cardiac muscle on the basis of their structure and function?
- 6. What are neurons? Explain its structure and function?
- 7. Where are fat stored in our body?
- 8. When tissues help in repair of other tissue?
- 9. Differentiate between ligament and tendons?
- 10. Which tissue fills the space inside the organ and which tissue fills the space between internal organs?
- 11. What is cartilage? Explain its main function?
- 12. What are glandular epitheliums?
- 13. Which tissue forms the inner lining of our mouth?
- 14. Which tissue connects muscle to bone?
- 15. Tissue that store fat in our body
- 16. Connective tissue with fluid matrix.
- 17. Tissue present in the brain
- 18. Location of dendrites
- 19. Location of ciliated columnar epithelium
- 20. Location of hyaline cartilage
- 21. Tissue that found in the iris of the eye.
